

Solar Irrigation for Agricultural Resilience (SoLAR) Innovation Fund (IF) Grants: Round 2

Request for Proposals (RFP)

Issued by: International Water Management Institute (IWMI), a CGIAR Research Center

Funded by: Swiss Agency for Development and Cooperation (SDC)

Date of issue: March 15, 2021 (Monday)

Deadline for sending questions regarding the call: April 2, 2021 (Friday) Questions should be sent to: questions.ifsolar@iwmi.org (subject line: Questions regarding RFP-IF-SoLAR).

Date for responding to questions: April 16, 2021 (Friday)

Deadline for submissions: April 30, 2021 (Friday)

Email address for sending submissions: submissions.ifsolar@iwmi.org (subject line: Submissions to RFP-IF-SoLAR)

Period of projects: Minimum 12 months and maximum 24 months from the date of start of the project

Geographic scope: Bangladesh, India, Nepal and Pakistan

Number of projects to be funded: Between three (03) to four (04) projects

Funding per project: Individual proposals will be awarded between 40,000 and 50,000 CHF (equivalent USD).

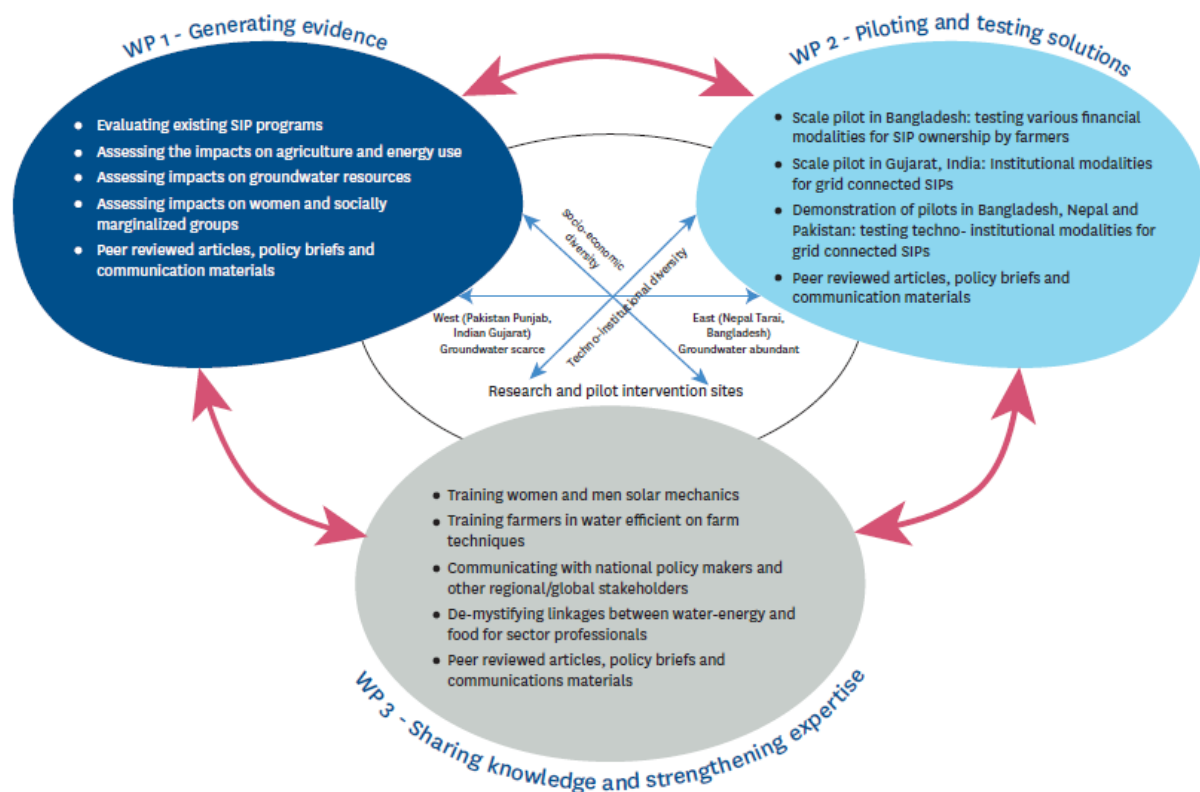

1. Background

South Asia is the world’s largest user of groundwater for agriculture, withdrawing approximately 250 km³ annually for irrigation. It is estimated that there are approximately 22 million water extraction pumps in **Bangladesh, India, Nepal and Pakistan**, of which approximately 12 million are electric and 10 million are diesel pumps. Groundwater pumping, fuelled by either electricity or diesel, has a substantial carbon footprint.

With growing concerns about climate change caused by carbon emissions, the International Water Management Institute (IWMI) is implementing a project titled *Solar Irrigation for Agricultural Resilience* (SoLAR) in South Asia funded by the Swiss Agency for Development and Cooperation (SDC). This project aims to contribute to respective country governments’ national determined contribution (NDC) commitments of reducing emissions from agriculture through the promotion of solar irrigation. Thus far, more than 250,000 solar irrigation pumps (SIPs) have been installed in the region (the majority of these are in India), but often without explicit consideration of groundwater sustainability, and gender and equity concerns.

The aim of the SoLAR project is to work closely with all relevant stakeholders to support the development of gender and socially inclusive, and groundwater responsive solar irrigation policies through three interlinked work packages (Figure 1). By working closely with national governments, the project will aim to support the testing and scaling of solutions that promote triple wins – improved livelihood outcomes for women and men farmers; reduced emission of black carbon and other short-lived climate pollutants from agriculture; and sustainable groundwater use – all leading to a more sustainable and climate-resilient agrarian future in South Asia.

Figure 1. Work packages of the SoLAR project.

2. The SoLAR Innovation Fund

The SoLAR Innovation Fund (IF) aims to support the development and testing of technological, financial and institutional innovations to address the constraints and challenges of scaling solar irrigation, with a special focus on the problems faced by small-scale, marginal, and women farmers in South Asia (specifically Bangladesh, Nepal, India and Pakistan). The IF will aim to support innovations and practices that can influence policy or be expanded and integrated into public, donor and private sector programs and practices with the support of additional funding sources. The objectives of the IF are as follows:

- Support innovations that help to **bridge the gaps that hamper the uptake** of solar irrigation pumps in South Asia.
- Support innovations targeted at **reducing barriers for sustainable adoption and use** of solar irrigation pumps by small-scale, marginal, and women farmers.
- Support innovations that encourage **the sustainable use of groundwater resources** when using solar-based irrigation.
- Support innovations that **enhance climate-resilient livelihood options** for small-scale, marginal, and women farmers in the region.

This is the second round of call for proposals for [Innovation Funds](#). [Five grants](#) were awarded in the first round of the call. In this round, a maximum of four (04) grants will be awarded. The expected value of funding for each innovation will vary between CHF 40,000 and CHF 50,000 (converted to its equivalent USD value). Expected project duration is minimum 12 months and maximum 24 months from the date of start of the project

3. Types of innovations that will be funded

We are looking for technical, social, and institutional innovations in the field of solar-powered irrigation that reduce barriers for the adoption of SIPs in South Asia (specifically Bangladesh, Nepal, India and Pakistan). This is not a start-up research grant, and only innovations that have shown promising preliminary results under real-life conditions will be funded. This requires innovations to have shown to be socially inclusive, contextually relevant and economically viable. Innovations may fall into either of the following categories or be a combination of these:

1. Technological innovations
 - a. Improving energy management protocols for distributed generation
 - b. Use of cost-effective sensors and Internet of Things (IoT) for efficient water and energy use and metering
 - c. Improving data and payment compliance (e.g., payment of instalments for SIPs by farmers, or payment from utility to the farmers) through use of remote monitors
 - d. Supporting sustainable groundwater use/governance, for example, through remote metering and control of pumps
 - e. Recycling of old panels
2. Financial innovations
 - a. Appropriate and affordable insurance products for SIPs
 - b. Appropriate loan and other financial products for small, marginal, and women farmers facilitating access to SIPs
 - c. Viable business models for SIP business entrepreneurs

- d. Incentives to support sustainable groundwater use/governance
3. Institutional innovations
 - a. Combining solar irrigation with other livelihood options such as agricultural value chains and creation of self-help groups, with a focus on small, marginal, and women farmers
 - b. Alternative use of excess solar energy generated from SIPs, including other energy markets for solar entrepreneurs
 - c. Creating self-sustaining groups of landless and/or women SIP irrigators/service providers
 - d. Incentives to support sustainable groundwater use/governance

Please note that the abovementioned topics are not exhaustive in any way, and applicants may suggest single or bundled innovations relevant to the themes/topics mentioned above.

4. Criteria for selection

Innovation fund grantees will be selected from an open competitive process. The SoLAR IF Grant will be open to all nongovernmental organizations, universities, technical institutes, research institutes, public and private sector enterprises and research laboratories, and government agencies, including local government institutions working in any of these four countries who are eligible for this grant. **This is not a research grant**, and all innovations have to be tested on the ground under real-life field conditions. Applicants must already have the required registrations and permits needed to work in the country they select, and proof of such registration/permit must be sent together with the application letter. Collaboration with Swiss firms/organizations is encouraged, though not mandatory.

Short-listed proposals will be judged on the following criteria:

- Nature and scope of the innovation and its relevance to the aims of this call
- Strategic and innovative value for meeting the challenges set out in the call
- Logic and clarity of the innovation and its design
- Technological, social, institutional and financial feasibility
- Potential for replication and scaling
- Effectiveness in improving climate change adaptation
- Financial viability of the innovation and exit strategy
- Value for money and cost-effectiveness of the project
- Expertise and qualifications of the project team
- Background and experience of the project team in handling similar projects

Innovation teams led by women, or teams that have at least 30% representation of women, will be given priority.

5. How to apply

To be considered for a Small Grant for Innovation, interested candidates must submit the following documents:

- A completed project proposal (in the prescribed format in Annex 1) along with detailed budget (see Annex 3).
- Half a page biography of each of the team members
- At least two professional references (details to be added in the proposal)

- Proposals should be limited to 15 pages (font size 11, Times New Roman, 1.5 spacing, standard margins) excluding maps, photographs and references that are considered essential for a complete appraisal of the project
- Applications will be reviewed and grants will be provided once a year.
- Proposals must be sent in the given format to: submissions.ifsolar@iwmi.org
- The decision of the selection committee reviewing the applications will be final.

Table 1. Important deadlines.

Start date for submissions	Deadline for sending questions regarding the call	Deadline for submissions	Announcement of selected grantees
March 15, 2021	April 2, 2021	April 30, 2021	July-August, 2021

6. Selection process

All grants are considered for funding on a competitive merit basis. A selection committee comprising of experts from Bangladesh, India, Nepal and Pakistan, and representatives from the International Solar Alliance (ISA), IWMI and SDC will evaluate the selection of grantees based on the abovementioned criteria, along with the technical strength of the applicant to ensure a successful and sustainable project. Funds will be provided to the successful individual in a phased manner – 50% on signing of the contract, 30% on a successful mid-term review and 20% on approval of a satisfactory final report submitted by the project leader. The final reports should also include full financial details of expenditure incurred as part of the project. IWMI and SDC must be acknowledged in all related publications/communications for implementing and funding the SoLAR project, respectively.

Table 2. Selection process.

Serial number	Step	Description	Deadline
Step 1	Announcement of the IF call and submission of proposals	The IF will be announced via email, on the websites of IWMI and SDC, and on various professional networks, social media, etc.	March 15-April 30, 2021
Step 2	Initial screening of applications	The Project Management Unit (PMU) of SDC-SoLAR will carry out an initial screening of applications in consultation with country leads.	April 30–May 15, 2021
Step 3	Application short list created and semi-finalists invited to make a presentation via videoconferencing	A panel of experts nominated by the Project Steering Committee (PSC), comprising one technical expert each from Bangladesh, India, Nepal and Pakistan, and members from ISA, IWMI and SDC will carry out a detailed review of the short-listed applications.	May 15–June 30, 2021

Serial number	Step	Description	Deadline
		The panel will create a short list of innovations for the final round of the IF grant and invite them to make a presentation to the selection panel.	
Step 4	Finalists announced	Final grantees selected and vetted by the PSC, and finalists are announced.	July-August, 2021
Step 5	IWMI signs contracts with each selected project and its lead institution	PMU will draw up contracts with each of the selected innovators to provide financial support for the project, and ensure agreement about work expectations.	September-October 2021
Step 6	Release of first payment instalment and commencement of the project	IWMI will disburse the funds as agreed regarding the deliverables and milestones. PMU and country co-leads will jointly monitor the progress of each project.	September-October 2021

7. What will the innovation grant not support?

- Purely research projects, without any field implementation plans
- Cash payments for direct budgetary support to an organization or for the purchase of solar pumps for distribution
- Payment for ongoing projects and expenses of recurring nature
- Organization of seminars, meetings and conferences, except where it can be demonstrated that the organization of such a meeting is critical to achieving the larger objectives of this grant
- Sponsorship to attend conferences, workshops, training programs in India or abroad
- Large-scale construction and high capital costs, including the purchase of vehicles
- Funds should be utilized primarily for development of the innovation and field activities, and not for administrative expenditure or the purchase of capital assets

Annex 1. Project Proposal Format.

Technical application form: All sections in the technical proposal must be completed. Maximum 15 pages (font size 11, Times New Roman, 1.5 spacing, standard margins).

Proposals must be submitted as one single PDF document and should follow the structure laid down in this document. All sections, and annexes should be numbered correctly. Annex 5 (two reference letters from sponsors/funders/patrons/companies with whom the applicant has worked earlier and successfully completed projects.) can be attached separately, but rest of the sections and annexes needs to be submitted as one PDF document. **Submissions that do not follow the structure laid out below, or is not submitted as one PDF document (except Annex 5, which can be submitted separately) will not be considered for further evaluation.**

Title of the proposal

Not more than 30 words. The title should be self-explanatory, clear, and concise.

Section 1: Executive Summary (1 page)

- Summarize the innovation, including why this innovation is unique and meets the challenges set forth in the call. If the proposal is successful, executive summary will be showcased in the project website. Keep this in mind while writing the executive summary.

Section 2: Justification (2 pages)

- What is being proposed and what is the need for this particular innovation?
- How does the innovation address the objectives of the SoLAR IF?
- What is the demand for this type of innovation and where is this demand coming from (the government, private sector, farmers, etc.)? Provide evidence that such a demand exists.
- How does this innovation address climate change concerns – both mitigation- and adaptation-related concerns.

Section 3: The innovation (5 pages)

- Describe the innovation, and its objectives and design.
- Explain whether the innovation is commercially viable and sustainable.
- What is the potential for replication and scaling up of this innovation? Provide a detailed explanation of how the impact of the innovation will continue after the end date of the award, and how the innovation will be scaled up after close of the award.
- Provide an indicative sustainability plan and exit strategy.

Section 4: Implementation plan (3 pages)

- Provide an impact pathway narrative – how will the proposed activities lead to desired outputs and outcomes?
- Key activities and milestones, and timeframe for each stage of the project. Describe each of the activities in detail. Provide a Gantt chart of activities.
- Indicate the type of data to be collected, and how data and research/implementation results would contribute to scaling of innovation.
- Discuss other stakeholders that will need to be engaged to support implementation or scaling up of the innovation, and describe how and when that engagement will take place.
- Briefly identify risk and mitigation measures. These risks may include, but not limited to, the current pandemic (Covid-19) situation, and other contextual, market, programmatic, institutional and/or political factors, and those related to partnerships and the business venture. Include a risk mitigation matrix (in the prescribed format in Annex 2) as an annexure to the main proposal.

Section 5: Impacts on small-scale, marginal, women and youth farmers, and other marginal sections (such as tribal farmers, ethnic/religious minorities, etc.) (2 pages)

- Explain how the innovation will meet its objectives while also lead to equitable outcomes for smallholder farmers and marginalized populations, including women and youth.
- Describe how the innovation can positively impact these target populations. Provide an impact pathway narrative as it relates to inclusion of these traditionally excluded groups.

Section 6: Organizational, management and technical capacity (2 pages)

- Provide a brief description of the organization and its activities.
- Describe the experience of the organisation in undertaking the proposed activities in similar contexts.
- Explain relevant technical and management experience of key staff. Provide the names of relevant staff and describe their roles and responsibilities. Include a half-page bio for each team member as an annexure to the main proposal. Teams lead by women and/or those with diverse composition (women, youth, etc.) will be given extra points during the evaluation.
- Describe any anticipated gaps in capacity, and plans to cover these gaps – through hiring, consultancy contracts, etc.

Section 7: Budget narrative (1 page)

- Provide a detailed budget narrative, including a statement on value for money and cost-effectiveness of the project.
- For projects that are to be commercially up-scaled, please provide a three-year projection of revenue, costs and net incomes.
- Detailed budget to be appended (in a given format) as an annexure to the main proposal.

- A statement confirming that the organization/company has the needed clearances for receiving funds from IWMI HQ in Sri Lanka

Annexures to the main project proposal:

1. A risk mitigation plan/matrix (in the prescribed format in Annex 2).
2. Short biography of team members (maximum half a page per team member).
3. Detailed budget (in the prescribed format in Annex 3).
4. Photos/sketches/or any visual aid that explains the Innovation in a succinct way (optional, but encouraged).
5. Two reference letters from sponsors/funders/patrons/companies with whom the applicant has worked earlier and successfully completed projects.

Annex 2. Risk Mitigation Matrix Format.

Likelihood/Impact	High	Medium	Low
-------------------	------	--------	-----

Risk	Likelihood of occurrence (color code)	Impact (color code)	Planned measures for mitigation
Covid-19-related risks			
Contextual risks			
Programmatic risks			
Institutional risks			
Fiduciary/Financial risks			

Annex 3. Budget Format.

This Request for Proposals “RFP” is not an agreement/an offer/invitation by the International Water Management Institute (IWMI) and the purpose of this RFP is to provide interested parties with information that may be useful in formulating their Proposals pursuant to this RFP.

The statements and information contained in this RFP may not be complete or adequate. Therefore, each Applicant should conduct their own analysis and/or investigation to check the adequacy, reliability and completeness of the information contained in this RFP and obtain independent advice from appropriate sources in formulating their Proposals.

IWMI at its own absolute discretion, but without being under any obligation to do so, can update, amend or supplement the information contained in this RFP.

The issue of this RFP does not imply that IWMI is bound to select an Applicant or to appoint the Selected Applicant, as the case may be, and reserves the right to reject all or any of the Proposals without assigning any reasons whatsoever.

The Applicant shall bear all costs associated with or relating to the preparation and submission of their Proposal, and IWMI shall not be liable in any manner whatsoever for the same or for any other costs or expenses incurred by an Applicant in preparation or submission of the Proposal, regardless of the conduct or outcome of the Selection Process.
