

Field Visit of Precision Surface Irrigation Site in Rahim Yar Khan and inspection of the field trials

IWMI, under the SDC, funded SoLAR project, has partnered with Khawaja Fareed University of Engineering and Information Technology (KFUEIT) to generate field-level evidence on some of the farm-level agricultural water management best practices coupled with solar irrigation pumps. IWMI has also provided training on precision surface irrigation to faculty, students, and farmers during on-field trials. Four trial sites were undertaken during the winter season to sow wheat under different configurations of the farming fields. IWMI visited the trial sites before the crop was ready to harvest to see the progress and evaluate some of the early results.
